

Draft ACT Plan Motion Sheet- for Discussion at Mobility Committee

The City Manager is directed to perform the following regarding implementation of the ACT Plan:

- Ensure capital project costs are inclusive of all project needs, including green infrastructure, utility relocation, and drainage improvements, at the time of funding allocation, and require appropriate funding participation by the corresponding utility and enterprise departments.
- For remaining one-way streets in the ACT Plan, study a two-way conversion option with new network analysis and updated annual average daily traffic counts at time of a Preliminary Engineering Review for future capital improvements.
- Develop a plan to proactively and systematically address curb management downtown by December 2026 in accordance with forthcoming curbside management study recommendations.
- Develop near-term funding and implementation scenarios by June 30, 2026 to identify and rapidly implement multimodal projects such as transit-only lanes, bike facilities, and 2-way conversions detailed in the ACT Plan, and present those scenarios at the July 9, 2026 Mobility Committee meeting.
